#### 1. Technical data

Supply voltage: 230 V AC 50-60 Hz

Auxiliary voltage: 24V DC

Isolation class: Class I.

Mechanical size:  $230 \times 190 \times 90 \text{ mm}$ 

IP protection: IP 56

Mass of cover: termoplast (ABS)

#### 2. General description

The device is used to switch the valves and pumps of the irrigation system on and off in cooperation with the MM8D.

The device has three control inputs, three 24V DC valve outputs, one 230V AC pump output and two pressure fault NC relay contact outputs. To activate the inputs, the auxiliary voltage must be connected to them. When any input is activated, the pump output also turns on. If the water pressure exceeds the set value (eg clogging), the pump output is switched off and the >Pmax output is switched on. If the water pressure falls below the set value during operation (eg lack of water), the pump output is switched off and the <Pmin output is switched on.

### 3. Schematic drawing

The wiring diagrams of the device is shown in Annex 1. You can download it as part of the complete documentation or in separate PDF format from the developer/manufacturer's website.

#### 4. Terms of use

Hardware documentation can be modified and/or redistributed under the Creativ Commons 4.0 Attribution Non-Commercial (CC-BY-NC-4.0) License. You can read the full text of the license online. (Refer to Chapter III for references.)

## 5. Internal structure of the device

- 1. Fuse (F1)
- 2. Transformer (Tr1)
- 3. Fuse (F2)
- 4. Diodes (D1-4)
- 5. Relays of valve outputs (K1-3)

- 6. Relay of water pump output (K4)
- 7. Relay of >Pmax error output (K5)
- 8. Relays of <Pmin error output (K6-7)
- 9. Connectors (P1-21 from top to bottom)
- 10. Mounting holes
